

# Youth Physics Writing Contest

Adel Mohamed

## Overview

This document is a practical plan for running a physics writing competition at our school. The aim is to push students to turn physics into writing people actually enjoy reading, in a magazine style rather than a formal paper.

## Suitable Topics

- Space and Astronomy
- Electricity and Magnetism
- Waves and Sound
- Modern Physics
- Quantum Physics (simplified)
- Thermodynamics
- Physics in Daily Life

## Format

Each article follows a magazine structure:

- Title
- Introduction: a short hook that catches attention
- Main Explanation: the physics idea made clear
- Real-life Applications
- Interesting Insight: a surprising fact or paradox
- Conclusion: a brief closing

Length sits between 600 and 1500 words. Write for a curious nonspecialist. Keep language warm and clear. Graphs, figures, and GIFs are welcome. Analogies and everyday examples help. AI-generated text is not accepted.

## Submission and Dates

Articles go in as Word or PDF, alongside an optional image or GIF. The form collects name, school, and topic. Registration is open from September 4 to September 30. Judging runs from October 1 to October 5.

## Evaluation

Each piece is scored out of 100:

- Scientific accuracy - 40
- Clarity and flow - 25
- Creativity and originality - 20
- Real-life connection - 10
- References and support - 5

Mentors and editors read each article independently against the same rubric so the process stays fair.

## Results and Awards

There is a single round. The top 30% of participants receive medals in a Gold : Silver : Bronze ratio of 3 : 2 : 1. The top three on the leaderboard get special prizes, and everyone receives a certificate. Results are announced on October 5.

## Publication

The strongest articles are gathered into a digital magazine issue for the wider school community to read. The finished magazine is the real output of the competition, not just a ranking.
